SUMMARY

Computer Science professional with 6+ years of software development experience specializing in full-stack web application development, relational database design, and RESTful API development. Proven ability to deliver production-ready software for real-world clients in Agile/Scrum environments. Experienced in requirements analysis, technical documentation, system design, and cross-functional team collaboration.

TECHNICAL SKILLS

Languages: C# (6 yrs), Python (4 yrs), SQL (3+ yrs), JavaScript (2+ yrs), PHP, Java, R, HTML/CSS

Frameworks & Libraries: ASP.NET MVC / .NET Core, Vue.js, React, PHP Slim, Bootstrap, Tailwind CSS, pandas, NumPy

Databases: SQL Server (T-SQL, stored procedures, relational modeling), PostgreSQL, SQLite, Power BI integration

APIs & Security: RESTful API design, Role-Based Access Control (RBAC), OTP email authentication, middleware development

Tools & Methodology: Git/GitHub, Jira, Figma, Visual Studio, VS Code, Postman, Agile/Scrum, Claude Code, Azure Fundamentals

Compliance & Standards: WCAG 2.1 accessibility compliance, technical documentation, requirements specifications, ERD design

SOFTWARE ENGINEERING EXPERIENCE (PROJECT-BASED)

Backend & Full-Stack Developer — *Office of Water Programs Forum — Sacramento State* Oct 2025 – Present
Sacramento, CA — Volunteer — Real-World Client Project

- Building a RESTful API using PHP Slim framework supporting full CRUD operations across a four-tier role system (Admin, Moderator, User, Guest) for a client organization that trains over 14,000 water and wastewater professionals annually.
- Architecting and implementing a T-SQL relational database with OTP email authentication and custom middleware for permission-based route protection and session management.
- Contributing to Vue.js frontend development including responsive, WCAG 2.1-compliant UI components ensuring accessibility across desktop and mobile platforms.
- Developed Figma UI mockups to present design concepts to the client for review and approval prior to implementation, facilitating iterative requirements refinement.
- Participating in bi-weekly client meetings, sprint planning in Jira, and daily team coordination via Discord in an 8-person Agile/Scrum team.

Project Lead & Backend Developer — *Medical Web Application — CSC 131* Jan 2024 – May 2024
California State University, Sacramento — Volunteer — Academic Client Project

- Led a 6-person development team as project lead and primary backend developer, driving the majority of commits across all major system modules.
- Built the full backend in ASP.NET MVC with C#, implementing role-based authentication (doctor, worker, patient), patient record management, appointment scheduling, prescription tracking, and secure in-app provider messaging.
- Designed and normalized a relational database schema in SQL Server using stored procedures for performance and security; later migrated to PostgreSQL to support Power BI reporting and analytics integration.
- Implemented full CRUD functionality across all modules including patients, appointments, prescriptions, medical history, and clinic locations.
- Produced comprehensive project documentation including requirements specifications, entity relationship diagrams, architectural diagrams, use case models, and UI design flows.
- Coordinated team task delegation, managed GitHub version control, and resolved merge conflicts throughout the development lifecycle.
- Performed functional testing and bug fixes across all modules, validating behavior against documented requirements.

Developer — *Discord Voice Word Tracker* 2025
Personal Project

- Built a Discord bot in Python using Pycord that captures per-user audio streams and transcribes speech entirely on-device via Faster-Whisper; posts per-user word counts and top keywords to a text channel at session end.

Developer — *SmartTripPlanner (Local AI Trip Planner)*

2025

Personal Project

- Built a local AI trip planner in ASP.NET Core with a Blazor Server UI that uses an agent loop to research destinations, check Google Calendar availability, validate travel times via Haversine distance calculations, and create optimized itineraries.
- Runs entirely on local hardware via Ollama with tool-calling LLMs (Qwen 3.5 35B-A3B); persists trip history and location caches in SQLite with EF Core. Includes a REST API for external integrations and 41 unit tests covering all services.

Developer — *Drive Smart (Educational Driving Website)*

2025

Personal Project — *sardella.dev/drive-smart*

- Built a static WordPress website with a custom theme teaching real-world defensive driving tips not covered in traditional driver's education, including following distance, highway merging, weather driving, and zipper merging.
- Designed a responsive layout with CSS custom properties, interactive dropdown navigation, and a mobile hamburger menu for a polished cross-device experience.

Developer — *X Country Filter (Chrome Extension)*

2025

Personal Project

- Built a Chrome extension that filters posts on X (Twitter) by geographic origin, intercepting API responses via content scripts to extract user location metadata and resolve it to country codes.
- Implemented allowlist/blocklist filtering modes with hidden and collapsed display options using MutationObserver for real-time DOM manipulation as the feed loads.

VOLUNTEER EXPERIENCE**Game Developer (Volunteer)** — *Toontown in Unity*

Oct 2021 – Nov 2023

Remote — *Salt Lake City, UT* — *toon.gg*

- Volunteer developer for Toontown in Unity, a community-driven multiplayer game project built in C# with an active Discord player base.
- Developed and shipped Pizzatron 3000, a fully playable multiplayer minigame, and contributed to Match Minnie through development and testing.
- Implemented networking functionality using the Krypton networking library including data transmission and distributed object setup to support multiplayer gameplay.
- Modified core game logic, built UI elements for minigames, and handled gameplay fixes and improvements; worked primarily independently while collaborating with the project lead on specific systems.

PROFESSIONAL EXPERIENCE**AI Automation Engineer (Contract)** — *Drover Insights LLC*

Mar 2026 – Present

Remote — *California*

- Building AI-powered automation agents using Claude Code to solve real business workflow problems for small and mid-size clients.
- Providing technical consulting and architectural guidance on software implementation, tech stack decisions, and system design.
- Designing reusable automation frameworks to deploy consistent AI-powered workflows across multiple business clients from a single tool.
- Analyzing client business processes to identify inefficiencies, improve prompt engineering, and accelerate automation deployment timelines.
- Built **Drover Dashboard**, a plugin-based internal analytics platform in React + TypeScript with Supabase backend, integrating Google Analytics 4, Search Console, Google Ads, and Meta Ads through Edge Function proxies with JWT-verified auth.
- Implemented Claude API-powered analytics insights, a CRM pipeline with Kanban board, scheduled email reports, alert management, and PDF export functionality; deployed on Cloudflare Pages.
- Developed **SmartApply Agent**, an automated job application system using Claude Sonnet that discovers jobs across 7 sources (Adzuna, Indeed, LinkedIn, RemoteOK, WeWorkRemotely, Remotive, HackerNews), scores candidates 0–100, and generates ATS-optimized resumes and cover letters.
- Integrated Playwright browser automation to auto-submit applications across 6 ATS platforms (Lever, Greenhouse, Workday, iCIMS, Taleo, SmartRecruiters) with CAPTCHA handling and AI-powered screening question answering.
- Built a web dashboard with Chart.js analytics, a Discord bot with slash commands for job approvals and mode control, and IMAP email monitoring with Claude-powered recruiter response classification and auto-reply.

Computer Tech & Operations Support — *Pool Time Pool and Spa*
Rancho Cordova, CA

Jan 2021 – Jun 2021

- Brought on to evaluate and implement job estimation software for a growing operations company with 50+ employees; independently assessed existing workflows, determined proposed software was not viable, and researched and presented alternatives to ownership.
- Configured and maintained GPS fleet tracking systems monitoring 5–10 service vehicles to ensure accurate scheduling and dispatch records.
- Extracted operational data from field service management software and manipulated datasets in Excel to support scheduling, dispatch tracking, and reporting.
- Trained staff on mobile time tracking applications and provided technical support for Windows systems, office hardware, and network infrastructure across the organization.

Shift Manager — *Burger and Cream*
Auburn, CA

Nov 2015 – Dec 2020

- Managed daily shift operations for a fast casual restaurant with a staff of 15 employees, overseeing scheduling, task delegation, and floor supervision.
- Handled network infrastructure work including ethernet cabling, security camera setup, and configuration of workstations and point-of-sale hardware.
- Led technical coordination of a POS system migration including transition planning, menu system updates, and staff onboarding to the new platform.
- Built a Windows desktop application to automate labor calculation workflows, reducing time spent on manual tracking.

EDUCATION

Bachelor of Science, Computer Science
California State University, Sacramento

Expected May 2026

Associate of Science, Computer Science
Sierra College — Rocklin, CA

May 2024
