## SUMMARY

Full-stack and AI engineer who ships production web and LLM-powered applications in C#, TypeScript, Python, and SQL. Owns projects end-to-end, from database design to frontend, working in fast-moving Agile teams with real clients.

## TECHNICAL SKILLS

**Languages:** C#, TypeScript, Python, SQL/T-SQL, JavaScript, PHP, Java, R, HTML/CSS

**Frameworks:** ASP.NET MVC / .NET Core, Next.js, React, Vue.js, Blazor, FastAPI, Django/DRF, Node.js, PHP Slim, Tailwind CSS, Bootstrap, pandas, NumPy

**Databases:** SQL Server (stored procedures, relational modeling), PostgreSQL, SQLite, Supabase, Power BI integration

**AI/LLM:** LLM application development, AI agents & agentic workflows, prompt engineering, model evaluation/scoring pipelines (LLM-as-judge), tool-calling, Claude (Anthropic) API, Google Gemini, Ollama

**APIs & Tools:** RESTful APIs, RBAC, OTP auth, Docker, Stripe, Git/GitHub, GitHub Actions (CI/CD), Azure DevOps, Hangfire, Jira, Figma, Postman, Agile/Scrum, Visual Studio, VS Code

## EXPERIENCE

**AI Solutions Engineer (Contract)** | *Drover Insights LLC*

Mar 2026 – Present

*Remote, California*

- Sole engineer building AI automation tools and internal software for a business consulting firm; own architecture, delivery, and code review across multiple client projects.
- Built Drover Content, a multi-tenant B2B AI content/image generation SaaS on Next.js 16 + Supabase (Auth, Postgres with RLS, Storage, Queues, Edge Functions): provider abstraction across Kie and Google Gemini, an async job state machine with retry/backoff and dead-letter handling, four-role RBAC, and Stripe subscription + usage-metered billing.
- Built a React/TypeScript analytics dashboard integrating 4 marketing data sources (GA4, Search Console, Google Ads, Meta Ads) through Supabase Edge Function proxies, with Claude API insights, a CRM Kanban board, and scheduled reports.
- Built a Python LLM evaluation pipeline (agent scoring against task suites, LLM-as-judge) that tunes agent configs to raise task-completion accuracy, plus a Playwright RPA tool automating data collection and submission across client environments.

**Team Lead & Full-Stack Developer** | *OWP Forum, Sacramento State*

Oct 2025 – May 2026

*Sacramento, CA. Real-world client project, 8-person Agile team*

- Led a RESTful API in PHP Slim with full CRUD across a four-tier role-based access control system (Admin, Moderator, User, Guest) for a client that trains 14,000+ professionals annually.
- Designed a normalized T-SQL database schema with stored procedures, OTP email authentication, and custom middleware for permission-based route protection.
- Built WCAG 2.2-compliant Vue.js frontend components and Figma mockups presented directly to the client at bi-weekly sprint reviews.
- Configured a CI/CD pipeline via GitHub Actions running PHPUnit and Vitest on every push; managed sprints in Jira with feature branching and PR review. Delivered and handed the project off to the client in May 2026.

**Project Lead & Backend Developer** | *Medical Web Application, CSU Sacramento*

Jan 2024 – May 2024

*6-person Agile team*

- Led backend development in ASP.NET MVC with C#: role-based authentication, patient records, appointment scheduling, prescription tracking, and secure in-app messaging.
- Designed a normalized SQL Server schema with stored procedures, migrated to PostgreSQL for Power BI reporting, and built full CRUD across all modules. Produced requirements specs, ERDs, and architecture diagrams.

**Game Developer (Volunteer)** | *Toontown in Unity, toon.gg*

Oct 2021 – Nov 2023

*Remote*

- Shipped Pizzatron 3000, a multiplayer minigame in C#, and contributed to Match Minnie. Implemented networking via the Krypton library (distributed objects, real-time data sync), debugged core gameplay, and ran regression tests before each release.

**Earlier:** Computer Tech & Operations Support at Pool Time Pool and Spa and Shift Manager at Burger and Cream (2015–2021): Windows/network support across 50+ employee organizations, GPS fleet tracking, helped with a POS system migration, and built a C# desktop app to automate labor calculations.

## PROJECTS

---

**Quorum** | *Python, Ollama (local LLM), InsightFace, ffmpeg, TMDB API* 2026

- Fully offline AI media organizer for Plex: nine CLI modes that sort and metadata-enrich home video and photo libraries, generate AI titles/descriptions, cluster faces via computer vision, identify commercial films through TMDB, and log every change to reversible JSONL transactions for full undo.

**Academ-VR** | *Django 5 / DRF, Next.js 14, React 18, A-Frame, JWT* 2026

- Full-stack 360° VR e-learning platform delivering A-Frame video courses with multi-role dashboards (student, instructor, admin), course hierarchy, quizzes, progress tracking, token-based invites, and analytics.

**3DAI** | *TypeScript, Node.js, OpenSCAD, Google AI API, Docker. Hornet Hacks 4.0* 2026

- Multi-level training pipeline for an AI 3D model generation system: Level 1 agents iteratively generate and score OpenSCAD code with 4-angle renders for human approval; Levels 2–3 add regression and generalization testing with cross-training scorecards.

**CalSight** | *React, TypeScript, FastAPI, PostgreSQL, Docker, Leaflet* 2025

- Civic data explorer visualizing millions of California crash records with interactive choropleth maps, filterable charts, and a FastAPI backend serving PostgreSQL queries via Docker Compose.

**SmartTripPlanner** | *ASP.NET Core, Blazor, Ollama, Google Calendar API* 2025

- Local AI trip planner with an agent loop that researches destinations, checks calendar availability, validates travel times, and pushes itineraries to Google Calendar via tool-calling LLMs. Covered by 41 unit tests.

## EDUCATION

---

**Bachelor of Science, Computer Science** May 2026

California State University, Sacramento

**Associate of Science, Computer Science** May 2024

Sierra College, Rocklin, CA

**Certifications:** Microsoft Azure Fundamentals (AZ-900) · Microsoft Azure Data Fundamentals (DP-900) · Google: Cybersecurity Essentials, Office of the CISO Institute (2026) · Google: Foundations of Cybersecurity (2026) · Google: Foundations: Data, Data, Everywhere (2026) · Google: Crash Course on Python (2026)
