SUMMARY

Full-stack developer with 6+ years of software development experience and a strong background in C#, Python, SQL, and modern web frameworks. Builds production-ready applications, REST APIs, and automation tools across web and AI-powered platforms. Comfortable owning projects end-to-end — from database design to frontend — and working in fast-moving Agile teams with real clients.

TECHNICAL SKILLS

Languages: C# (6 yrs), Python (4 yrs), SQL/T-SQL (3+ yrs), JavaScript (2+ yrs), PHP, Java, R, HTML/CSS
Frameworks: ASP.NET MVC / .NET Core, Vue.js, React, PHP Slim, Bootstrap, Tailwind CSS, pandas, NumPy
Databases: SQL Server (stored procedures, relational modeling), PostgreSQL, SQLite, Power BI integration
APIs & Tools: RESTful APIs, RBAC, OTP auth, Git/GitHub, GitHub Actions (CI/CD), Azure DevOps, Jira, Figma, Postman, Agile/Scrum
IDEs: Visual Studio, VS Code

SOFTWARE ENGINEERING EXPERIENCE

Backend & Full-Stack Developer — *OWP Forum — Sacramento State* Oct 2025 – Present
Sacramento, CA — Real-world client project, 8-person Agile team

- Developing a RESTful API in PHP Slim with full CRUD across a four-tier role-based access control system (Admin, Moderator, User, Guest) for a client that trains 14,000+ professionals annually.
- Designed a normalized T-SQL database schema with stored procedures for security and performance, OTP email authentication, and custom middleware for permission-based route protection.
- Building WCAG 2.2-compliant Vue.js frontend components and Figma mockups presented directly to the client at bi-weekly sprint reviews.
- Configured a CI/CD pipeline via GitHub Actions running PHPUnit and Vitest test suites on every push. Managing sprints in Jira with feature branching and PR review workflows.

Project Lead & Backend Developer — *Medical Web Application* Jan 2024 – May 2024
California State University, Sacramento — 6-person Agile team

- Led backend development in ASP.NET MVC with C#: role-based authentication, patient records, appointment scheduling, prescription tracking, and secure in-app messaging.
- Designed a normalized SQL Server schema with stored procedures; migrated to PostgreSQL for Power BI reporting, validating data integrity throughout.
- Built full CRUD across all modules. Produced requirements specs, ERDs, architecture diagrams, and use case models. Mentored a teammate on secure coding standards.

Game Developer (Volunteer) — *Toontown in Unity* Oct 2021 – Nov 2023
Remote — toon.gg

- Shipped Pizzatron 3000, a multiplayer minigame in C#, and contributed to Match Minnie through development and testing.
- Implemented networking via the Krypton library including distributed objects and real-time data sync for multiplayer gameplay.
- Modified core game logic, built UI elements, and performed debugging and regression testing across the project.

PROFESSIONAL EXPERIENCE

AI Solutions Engineer (Contract) — *Drover Insights LLC* Mar 2026 – Present
Remote — California

- Designing and developing AI-powered automation tools and internal software for a business consulting firm serving small and mid-size clients.
- Built a React/TypeScript analytics dashboard integrating GA4, Search Console, Google Ads, and Meta Ads through Supabase Edge Function API proxies. Includes Claude API-powered insights, CRM Kanban board, and scheduled reports.
- Building a Python-based training and evaluation pipeline that scores AI agent performance against defined tasks and iteratively improves agent configurations to increase task completion accuracy.

- Developed a Playwright-based RPA tool automating job application data collection and submission workflows across multiple client environments.
- Conducting code reviews evaluating structure, functionality, and security. Consulting on software architecture and tech stack decisions.

Computer Tech & Operations Support — *Pool Time Pool and Spa*
Rancho Cordova, CA

Jan 2021 – Jun 2021

- Evaluated proposed job estimation software, determined it was not viable, researched alternatives, and presented options to ownership.
- Configured GPS fleet tracking for 5–10 vehicles, extracted and manipulated operational data in Excel, and trained staff on mobile time tracking tools.
- Provided Windows technical support and network infrastructure work across a 50+ employee organization.

Shift Manager — *Burger and Cream*
Auburn, CA

Nov 2015 – Dec 2020

- Supervised 15 employees across daily operations; handled POS system migration, ethernet cabling, workstation setup, and security camera configuration.
- Built a Windows desktop application in C# to automate labor calculations, reducing manual tracking time.
- Produced operational documentation and trained non-technical staff on new technology systems.

PROJECTS

3DAI — *TypeScript, Node.js, OpenSCAD, Google AI API, Docker*
Hornet Hacks 4.0 Hackathon

2026

- Built a multi-level training pipeline for an AI 3D model generation system. Level 1 agents iteratively generate and score OpenSCAD code, then present 4-angle renders for human approval. Levels 2–3 add regression and generalization testing with cross-training scorecards.

CascadeGuard — *Next.js, TypeScript, Tailwind CSS, Cloudflare*

2026

- Live healthcare web app that detects prescribing cascades — where one drug is prescribed to treat a side effect of another. Built post-hackathon and deployed to production on Cloudflare.

CalSight — *React, TypeScript, FastAPI, PostgreSQL, Docker, Leaflet*

2025

- Civic data explorer visualizing millions of California crash records with interactive choropleth maps, filterable charts, and a FastAPI backend serving PostgreSQL queries via Docker Compose.

GitPulse — *ASP.NET Core 8, React 19, PostgreSQL, Azure, Hangfire*

2025

- Full-stack GitHub analytics platform with OAuth integration, automated commit sync pipeline via Hangfire background jobs, and a real-time dashboard displaying contributor activity and repo metrics.

SmartTripPlanner — *ASP.NET Core, Blazor, Ollama, Google Calendar API, SQLite*

2025

- Local AI trip planner with an agent loop that researches destinations, checks calendar availability, validates travel times, and pushes itineraries to Google Calendar. Runs via Ollama with tool-calling LLMs; 41 unit tests.

X Country Filter — *JavaScript, Chrome Extension MV3, GraphQL*

2025

- Chrome extension that filters X posts by geographic origin. Hooks into X's JSON.parse and XHR pipeline to extract user metadata, resolves locations via a multi-layer pipeline (emoji flags, location DB, GraphQL profile lookups), and hides/collapses posts in real time with adaptive rate limiting.

ItinerBot — *Python, discord.py, Google Calendar API, APScheduler, SerpAPI*

2026

- Discord bot syncing with Google Calendar to deliver daily trip itineraries and escalating ticket-sale alerts. Auto-detects sale times via SerpAPI, handles timezone conversions, and runs on a home server via NSSM.

EDUCATION

Bachelor of Science, Computer Science
 California State University, Sacramento

Expected May 2026

Associate of Science, Computer Science
 Sierra College — Rocklin, CA

May 2024

Certifications (In Progress): Microsoft Azure Fundamentals (AZ-900), Microsoft Azure Data Fundamentals (DP-900)
